Guacamole

Met Guacamole kan je vanuit de browser de computers in de studio overnemen.

Adres: <https://guacamole.studio.rtva.nl>

Inloggen gaat met je Studio-account. Als je voor de eerste keer inlogt, zie je nog geen computers.

Een beheerder moet dan [je account nog rechten toewijzen](#).

The screenshot shows the Apache Guacamole web interface in a browser window. The address bar shows the URL <https://guacamole.studio.rtva.nl/#/>. The page title is "Apache Guacamole".

The main content area is divided into two sections:

- RECENTE VERBINDINGEN**: This section displays two recent connections as thumbnails. The first is labeled "RTVA-PLAYOUT" and shows a multi-camera video production interface. The second is labeled "1AV-AUDIOBRIDGE" and shows an audio mixing console interface.
- ALLE VERBINDINGEN**: This section shows a tree view of all connections. The tree is expanded to show "Eindregie", which contains three sub-items: "RTVA-LIVEREGIE", "RTVA-PLAYOUT", and "RTVA-SUPPORT". Below the tree, there are two other categories: "Radio" and "Servers".

On the right side of the "ALLE VERBINDINGEN" section, there is a search filter labeled "Filter" and a status message: "Op dit moment in gebruik door 1 gebruiker." (Currently in use by 1 user).
